- **Avoid drilling in environmentally sensitive areas such as wilderness quality lands, roadless lands, and important wildlife habitats.** The BLM should withdraw from leasing or require "No Surface Occupancy" for oil and gas drilling on floodplains, roadless lands, wilderness quality lands, crucial elk and deer winter ranges, prairie dog colonies, mountain plover habitat, and within three miles of sage grouse leks and one mile of raptor nests.
- **Protect all lands within the Adobe Town citizens' proposed WSA.** In the project area there are almost 50,000 acres of wilderness-quality lands adjacent to the existing Adobe Town WSA. These lands should be protected by incorporating them into the larger, existing Wilderness Study Area.
- **Adopt a Conservation Alternative in the FEIS.** The FEIS must not only have a conservation (or true no action) alternative, but also adequate mitigation and monitoring measures to ensure proper protection for the area's special values.
- **Mandate the least environmentally damaging types of drilling.** Directional drilling should be required in the Desolation Flats Final EIS to minimize impacts to wildlife, recreation, and landscapes.

Dear Mr. Spehar,

The Desolation Flats project area contains spectacular public lands. In order to ensure adequate protection for the magnificent scenic and recreational value of the area as well as its outstanding wildlife habitat, I ask the Bureau of Land Management to:

- **Avoid drilling in environmentally sensitive areas such as wilderness quality lands, roadless lands, and important wildlife habitats.** The BLM should withdraw from leasing or require "No Surface Occupancy" for oil and gas drilling on floodplains, roadless lands, wilderness quality lands, crucial elk and deer winter ranges, prairie dog colonies, mountain plover habitat, and within three miles of sage grouse leks and one mile of raptor nests.
